

Joab Felton

United Kingdom

Phone: 07850926834

Email: joab.felton-cic@ibm.com

Education

First-Class Honours (BSc) in
Computer Science, Kingston
University London, GB, 2020

Digital Credentials

IBM Generative & Agentic AI
Foundation - 2026

Languages

English - Fluent

Profile

Pragmatic, delivery-focused Software Engineer with experience delivering modern web applications across enterprise, SaaS, and clean-energy environments. Specialising in React, Next.js, TypeScript, Tailwind CSS, and shadcn/ui, I build scalable, accessible, and maintainable applications that balance technical quality with user and business needs. Alongside my frontend expertise, I continue to develop my cloud capability through AWS Cloud Practitioner studies, complementing modern engineering practices with cloud-aware delivery.

Known for balancing technical constraints with stakeholder priorities, I make well-judged engineering decisions that keep delivery moving while maintaining long-term quality and maintainability. My experience includes refining frontend architecture, shaping design-system foundations, and exploring GenAI-assisted development practices. I bring transparent collaboration, independent thinking, and resourcefulness to fast-moving teams, helping deliver high-quality solutions that meet both client and business objectives.

Key skills

- **Core Technologies:** Proficient in JavaScript (ES6+), TypeScript, React, Next.js, HTML5, and CSS3
- **Styling & UI Engineering:** Skilled using Tailwind CSS, Material UI, and shadcn/ui to build responsive, accessible interfaces and reusable component libraries.
- **UI/UX Implementation:** Translating Figma designs into intuitive interfaces while maintaining design fidelity and enhancing the overall user experience.
- **API Integration:** Integrating REST and GraphQL APIs, optimising client-side data handling to improve application efficiency and performance.
- **Performance & Accessibility:** Improving application performance through Core Web Vitals optimisation, semantic HTML, ARIA, WCAG compliance, lazy loading, and asset optimisation.
- **Testing & Quality Assurance:** Writing Jest unit and component tests, supporting CI/CD workflows, and contributing to robust engineering practices.
- **Tooling & Build Systems:** Using Vite, Git, CI/CD pipelines (Jenkins, Bitbucket), Storybook, and Figma to streamline development, support reliable delivery, and maintain consistent engineering practices.
- **Generative AI:** Experienced using Cursor to generate dynamic prototypes, automate solution scaffolding, and streamline development workflows through LLM-powered coding assistance.
- **Agile Ways of Working:** Applying Agile delivery practices, sprint planning, and iterative development.
- **Additional Technologies:** Strong academic foundation in Java, Python, SQL (MySQL), and AWS

Work experience

Frontend Engineer

Fornax Energy (Short-term Contract), United Kingdom | Nov 2025 - Dec 2025

Led frontend delivery for Fornax, a clean-energy startup, shaping user-facing experiences that support practical, low-carbon heating solutions for homeowners.

- Facilitated UX-focused workshops with co-founders and platform leads to clarify requirements, validate user flows, and rapidly prototype solutions in Figma, leveraging Cursor to explore implementation approaches and reduce early-stage engineering time.
- Implemented a modern frontend stack using React, TypeScript, Vite, Tailwind, and shadcn/ui, creating reusable components and scalable design-system foundations that accelerated delivery and improved long-term maintainability.
- Built a data-driven quote pack in React/Vite, transforming raw survey data into interactive charts and structured layouts that helped homeowners compare heat-pump savings and visualise room-level heat loss.
- Established the company's first frontend capability by defining coding standards, introducing component-based architecture, and setting engineering practices that strengthened Fornax's position as a tech-first competitor.

Frontend Engineer

Thrive Learning (Remote), United Kingdom | Sep 2024 - May 2025

Improved platform experience by enhancing key UI features, refining learning journeys, and contributing to overall application reliability across Thrive's SaaS learning platform.

- Delivered responsive interfaces end-to-end from Figma designs using React, TypeScript, Tailwind, and shadcn/ui, and contributed to a shared Storybook library that standardised UI patterns and strengthened design consistency.
- Advanced accessibility by tightening keyboard navigation, improving screen-reader support, and refining dark-mode contrast, expanding usability for diverse audiences.
- Redesigned the follow/unfollow workflow using GraphQL queries, mutations, and Apollo caching, reducing redundant requests and improving perceived performance.
- Modernised navigation ahead of LearnTech by migrating to shadcn/ui and Tailwind, implementing full RTL support, and refreshing Storybook assets to improve global accessibility and UI cohesion.
- Strengthened engineering quality through pair-programming, active participation in pull-request reviews, and reinforcing shared coding standards across the team.

Technology Associate → Senior Associate

Infosys (Hybrid), United Kingdom | Mar 2021 - Aug 2024

Completed structured training and in-house certifications across frontend, backend, and data technologies, applying them over 2.5 years on HSBC's cloud data platform.

- Engaged with stakeholders to provide frontend input during requirements analysis, communicating technical decisions and trade-offs to guide design and ensure implementable solutions.
- Built well-structured, robust React/Material UI forms and data-driven components, collaborating with backend engineers on API integration to facilitate smooth end-to-end delivery.
- Wrote Jest unit tests and resolved production bugs to ensure code quality and prevent regressions.
- Integrated changes through Git branching workflows, partnering with QA and DevOps to support CI/CD pipelines for reliable, consistent releases.
- Authored technical documentation that streamlined engineering onboarding and boosted knowledge sharing across the development team.

Trainee Data Engineer

Generation UK (Remote), United Kingdom | Aug 2020 - Oct 2020

Completed an intensive 13-week Data Engineering bootcamp, developing practical skills in data pipelines, SQL-based database design, and cloud-based data processing.

- Built a Dockerised Python ingestion pipeline on AWS that transformed raw CSV files into structured, analysis-ready datasets, powering QuickSight dashboards that surfaced operational insights.

Additional information

- **Agile Foundation Certificate:** Certified January 2019 (Certificate No. 7986)
